## **Implementation of Round Robin Task Scheduling in Both Time Shared and Space Shared CPU**

### **AIM:**

To implement the round robin task scheduling in both time shared and space shared CPU using CloudSim.

### **PROCEDURE:**

1. Create a new project by selecting java console line application template and JDK 18.
2. Open project settings from the file menu of the options window.
3. Navigate to project dependencies and select on add external jars and then click on 'Browse' to open the path where you have unzipped the Cloudsim Jars and click on apply.
4. Create a java file with the cloudsim code to implement the round robin scheduling algorithm.
5. Run the application as a java file to see the output in the console below.

**CODE:** import org.cloudbus.cloudsim.\*;  
import  
org.cloudbus.cloudsim.core.CloudSim;  
import java.util.\*;

```
public class RoundRobinScheduler  
{ public static void main(String[] args) { try  
{
```

```
int numUser = 1; // number of cloud users
Calendar calendar = Calendar.getInstance();
boolean traceFlag = false; // mean trace
events
```

```
CloudSim.init(numUser, calendar, traceFlag);
```

```
Datacenter                                datacenter0                =
createDatacenter("Datacenter_0");
```

```
DatacenterBroker broker = createBroker(); int
brokerId = broker.getId();
```

```
List<Vm> vmList = new ArrayList<>();
int vmId = 0; int    mips        =
1000; long size = 10000; // image size
(MB) int ram = 512; // vm memory (MB)
long bw = 1000; int pesNumber = 1; //
number of CPUs String vmm = "Xen"; //
VMM name
```

```
for (int i = 0; i < 3; i++) {
    vmList.add(new Vm(vmId++, brokerId, mips, pesNumber, ram,
    bw, size, vmm, new CloudletSchedulerTimeShared()));
}
```

```
broker.submitVmList(vmList); List<Cloudlet>
```

```
cloudletList = new ArrayList<>(); int
```

```
cloudletId = 0; long length = 40000;
```

```
long fileSize = 300;
```

```
long outputSize = 300;
```

```
UtilizationModel utilizationModel = new  
UtilizationModelFull();
```

```
for (int i = 0; i < 6; i++) {  
    Cloudlet cloudlet = new Cloudlet(cloudletId++, length,  
    pesNumber, fileSize, outputSize, utilizationModel,  
    utilizationModel, utilizationModel);  
    cloudlet.setUserId(brokerId); cloudletList.add(cloudlet);  
}
```

```
broker.submitCloudletList(cloudletList)
```

```
;
```

```
CloudSim.startSimulation(); List<Cloudlet>
```

```
newList =
```

```
broker.getCloudletReceivedList();
```

```
CloudSim.stopSimulation(); printCloudletList(newList);  
} catch (Exception e)  
{ e.printStackTrace()
```

```

        ;
    } } private static Datacenter createDatacenter(String
name) { List<Host> hostList = new ArrayList<>();

    int mips = 1000; int ram = 2048; //
    host memory (MB) long storage =
    1000000; // host storage int bw =
    10000;

```

## RESULT:

Thus, to implement the round robin task scheduling using CloudSim is done successfully.
