Installation and Configuration of CloudSim in Eclipse IDE

AIM:

To install and configure the CloudSim in Eclipse IDE and run a java program in it.

PROCEDURE:

1. Java Installation:
   a. Check Java in your system.
   b. If Java not installed then download Java.
   c. Install Java setup.
   d. Set the path for Java in Environment Variables.
2. Download Cloud Sim and Additional JAR file:
   a. Download CloudSim 3.0.3
   b. Download common math 3 JAR file
3. Eclipse IDE Installation:
   a. Download the correct version of Eclipse IDE for your system.
   b. Install Eclipse IDE.
4. Run Cloud Sim in Eclipse:
   a. Put the common math 3 JAR file in the JAR folder of CloudSim.
   b. Build a new java project with CloudSim folder.

CODE:

```
package org.cloudbus.cloudsim.examples; import
java.text.DecimalFormat; import
java.util.ArrayList;        import java.util.Calendar;
        import
java.util.LinkedList;       import       java.util.List;       import
org.cloudbus.cloudsim.Cloudlet;                                 import
org.cloudbus.cloudsim.CloudletSchedulerTimeShared;
import         org.cloudbus.cloudsim.Datacenter;         import
org.cloudbus.cloudsim.DatacenterBroker;                     import

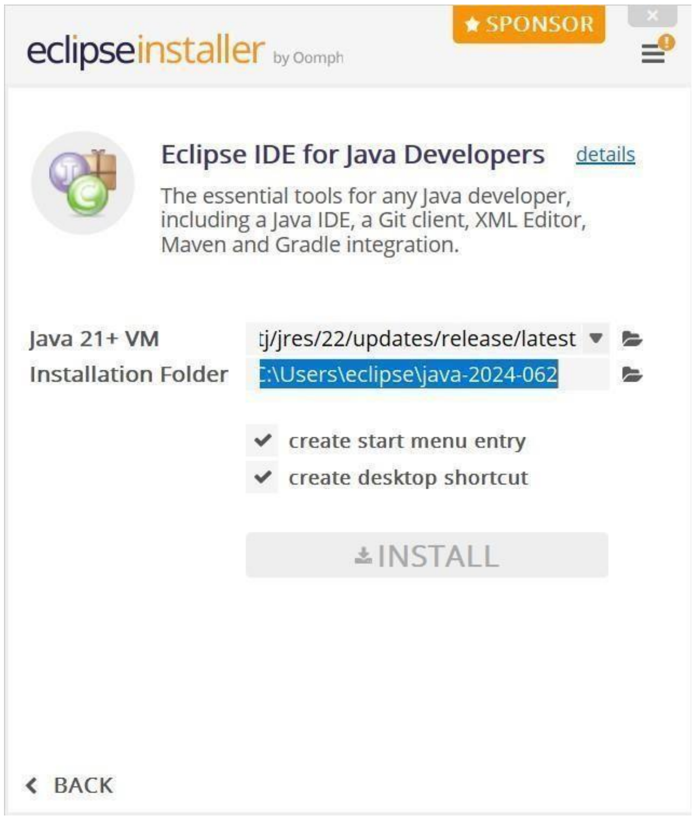
OUTPUT:



Eclipse IDE for Java Developers

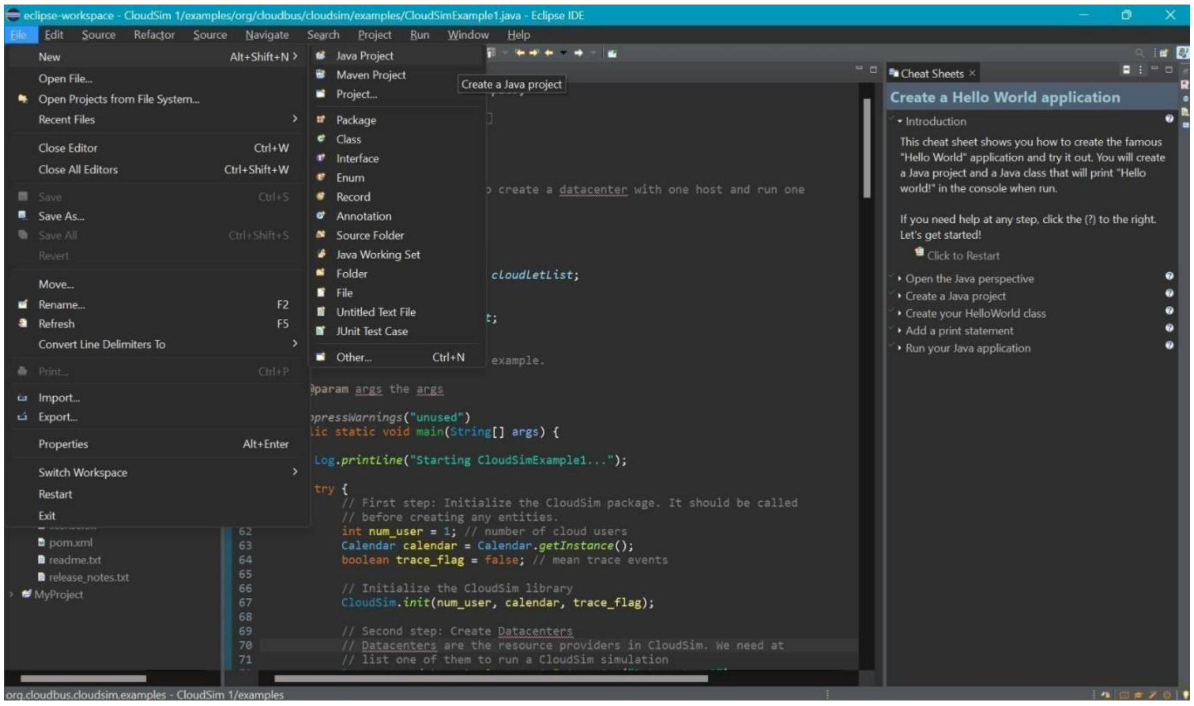
The essential tools for any Java developer, including a Java IDE, a Git client, XML Editor, Maven and Gradle integration.

Java 21+ VM: tj/jres/22/updates/release/latest

Installation Folder: C:\Users\eclipse\java-2024-062

✓ create start menu entry

✓ create desktop shortcut



eclipse-workspace - CloudSim 1/examples/org/cloudbus/cloudsim/examples/CloudSimExample1.java - Eclipse IDE

```
 create a datacenter with one host and run one

cloudletList;

t;

example.

@param args the args

ppressWarnings("unused")
lic static void main(String[] args) {

 Log.printLine("Starting CloudSimExample1...");

 try {
     // First step: Initialize the CloudSim package. It should be called
     // before creating any entities.
     int num_user = 1; // number of cloud users
     Calendar calendar = Calendar.getInstance();
     boolean trace_flag = false; // mean trace events

     // Initialize the CloudSim library
     CloudSim.init(num_user, calendar, trace_flag);

     // Second step: Create Datacenters
     // Datacenters are the resource providers in CloudSim. We need at
     // list one of them to run a CloudSim simulation
```

Create a Hello World application

Introduction

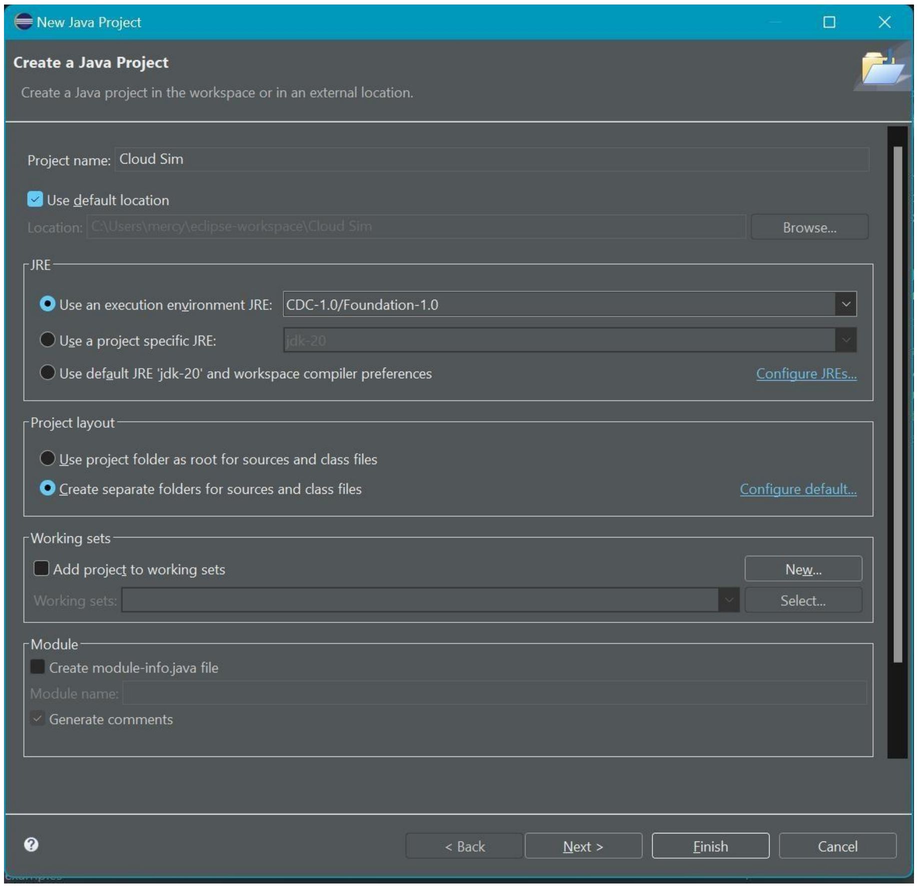
This cheat sheet shows you how to create the famous "Hello World" application and try it out. You will create a Java project and a Java class that will print "Hello world!" in the console when run.

If you need help at any step, click the (?) to the right. Let's get started!

Click to Restart

- Open the Java perspective
- Create a Java project
- Create your HelloWorld class
- Add a print statement
- Run your Java application

org.cloudbus.cloudsim.examples - CloudSim 1/examples



New Java Project

Create a Java Project

Create a Java project in the workspace or in an external location.

Project name: Cloud Sim

[✓] Use default location

Location: C:\Users\mercy\eclipse-workspace\Cloud Sim Browse...

JRE

- [●] Use an execution environment JRE: CDC-1.0/Foundation-1.0
- [○] Use a project specific JRE: jdk-20
- [○] Use default JRE 'jdk-20' and workspace compiler preferences Configure JREs...

Project layout

- [○] Use project folder as root for sources and class files
- [●] Create separate folders for sources and class files Configure default...

Working sets

[ ] Add project to working sets New...

Working sets: Select...

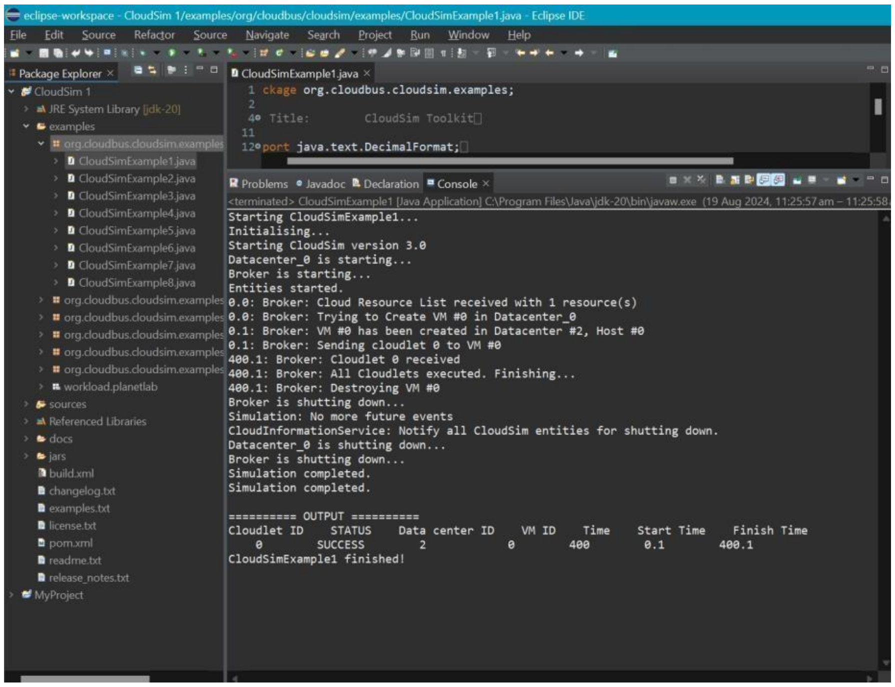
Module

[ ] Create module-info.java file

Module name:

[✓] Generate comments

< Back Next > Finish Cancel



eclipse-workspace - CloudSim 1/examples/org/cloudbus/cloudsim/examples/CloudSimExample1.java - Eclipse IDE

```
ckage org.cloudbus.cloudsim.examples;

 Title:        CloudSim Toolkit

port java.text.DecimalFormat;
```

<terminated> CloudSimExample1 [Java Application] C:\Program Files\Java\jdk-20\bin\javaw.exe (19 Aug 2024, 11:25:57 am – 11:25:58

```
Starting CloudSimExample1...
Initialising...
Starting CloudSim version 3.0
Datacenter_0 is starting...
Broker is starting...
Entities started.
0.0: Broker: Cloud Resource List received with 1 resource(s)
0.0: Broker: Trying to Create VM #0 in Datacenter_0
0.1: Broker: VM #0 has been created in Datacenter #2, Host #0
0.1: Broker: Sending cloudlet 0 to VM #0
400.1: Broker: Cloudlet 0 received
400.1: Broker: All Cloudlets executed. Finishing...
400.1: Broker: Destroying VM #0
Broker is shutting down...
Simulation: No more future events
CloudInformationService: Notify all CloudSim entities for shutting down.
Datacenter_0 is shutting down...
Broker is shutting down...
Simulation completed.
Simulation completed.

========== OUTPUT ==========
Cloudlet ID    STATUS    Data center ID    VM ID    Time    Start Time    Finish Time
    0        SUCCESS        2            0        400       0.1        400.1
CloudSimExample1 finished!
```

RESULT:

Thus, the installation and configuration of CloudSim in Eclipse IDE has been successfully completed.
